

The graph displays wave height data over a period of ten days. The solid blue line represents the actual buoy wave height, which shows significant fluctuations, peaking at approximately 10 ft on November 21st. The solid orange line represents the length-adjusted height, which also peaks on November 21st but at a lower value of about 8 ft. The dashed green line represents the forecast buoy wave height, which follows the general trend of the actual data but with less volatility. The dashed red line represents the forecast length-adjusted height, which also follows the general trend but with less volatility. A text box at the bottom right indicates the current values: 'Buoy Wave Height: 2.76 ft' and 'PM 3ft Length Adjusted Height: 0.99 ft'.
