

Wave Heights over Time for Oceanside Harbor at 2026-03-28 12:40:32

The graph displays four data series over time from March 26 to April 2, 2026. The y-axis represents height in feet, ranging from 0 to 10. The x-axis represents time in days.

- Buoy Wave Height (ft):** Solid blue line, showing actual buoy measurements.
- Length Adjusted Height (ft):** Solid orange line, showing height adjusted for length.
- Forecast Buoy Wave Height (ft):** Dashed green line, showing the forecast for buoy wave height.
- Forecast Length Adjusted Height (ft):** Dashed red line, showing the forecast for length-adjusted height.

Key observations from the graph:

- The buoy wave height (blue solid line) shows significant fluctuations, peaking around 10 ft on March 27 and 28.
- The length-adjusted height (orange solid line) shows a peak around 5 ft on March 27.
- The forecast buoy wave height (green dashed line) shows a general downward trend from about 7 ft on March 26 to 4 ft on March 31, followed by a sharp increase to over 10 ft on April 2.
- The forecast length-adjusted height (red dashed line) shows a peak around 3 ft on March 27, followed by a sharp increase to over 5 ft on April 2.

Text box information (bottom right):

- Buoy Wave Height: 2.45 ft
- PM 3ft Length Adjusted Height: 1.24 ft
- Buoy Sea state (NATO): 3 / Length Adjusted PM Sea state: 1

PM 3ft Length Adjusted Height: 1.24 ft

Buoy Sea state (NATO): 3 / Length Adjusted PM Sea state: 1
